Gutter guards are installed on rain gutters to prevent leaves, twigs and other debris from clogging the downspouts. Obstructed downspouts will prevent rain run-off from flowing through the rain-carrying system and away from the foundation. Water that cannot run freely can back-up and overflow the gutter causing damage to the landscaping and the foundation below. If water leaks behind the gutter, damage to the roofline and the fascia is a possibility. **Prevent costly repairs with Gutter Guards.**

- Black powder coated galvanized steel for long life.
- Low profile for better looks. They do not change the looks of you home.
- Mesh screen allows for evaporation of standing wa
- Handles high volume water flow.
- Will not buckle under ice or snow build-up.
- Very secure: unlike hinged gutter guards.
- Helps keep squirrels and birds out of attic and hom

Guttersupply.com says, "This screen is the strongest of all the metal screens we researched and is designed to retain its shape season after season."

What you should know about other gutter guards:

Hinged or Half Round gutter sreens *will not* stay on. Falling limbs or high wind will flip back or knock off hinged gutter guards. Debris washing down the roof will slip under hinged-gutter guards. They are bent easily.

Cover/Cap/Solid guards *do not* handle high volume drainage. Water will shoot off the roof at valleys and other areas of roof. They hold moisture. They *cannot* be easy cleaned out. (Sand from shingles will get past any gutter guard) This type is typically very expensive. Gutter guards loose there value when they cost you thousands.

Vinyl or plastic guards *will not* last. Squirrels chew them. The sun melts them. Snow, sleet and debris collapse them.
